

Table 1: Revision History

<b>Date</b>	<b>Developer(s)</b>	<b>Change</b>
2018-09-20	Vaibhav	Made the LaTeX file and wrote the section with what the Problem is
2018-09-20	Usman	Added the Importance of Problem section while formatting the LaTeX
2018-09-21	Andy Hameed	Formatted LaTeX file and added Context section, giving the final editing to the document
2018-10-09	Andy Hameed	Edited doc to reflect web app to desktop app decision change
2018-12-02	Vaibhav Chadha	Revision one changes to make the document better.

# SE 3XA3: Problem Statement

## Snake 2.0

Team #30, VUA30  
Usman Irfan - irfanm7  
Andy Hameed - hameea1  
Vaibhav Chadha - chadhav

2018-09-21

### The Problem

Almost everyone nowadays relies on a computer as a multipurpose tool for research, video streaming, gaming and many other tasks. With the emergence of fast computing, gaming has become a popular pastime activity and a source of entertainment for many. However, not everyone has a device powerful enough to support extensive game applications. A simple, memory efficient application of the Snake game allows it to be accessible for gamers without the need for extensive hardware or a high-performance computer. Our team, VUA30, will be creating a desktop application for the well-known Snake game with new enhancements and features. This competitive and addictive game can allow the user to play at **different levels and challenge their own highscore**

### Importance of the Problem

Buying a computing device with high storage and faster performance can be out of budget. Complicated software covers up all the storage and the user is bound to use these applications as opposed to downloading other software. The importance of the redevelopment of The Snake is to save computing **device's** personal storage and allow the user to play a game 24/7 with strong performance, even offline. Creating a desktop version of the snake game can fit into the category of downloadable classical games such as the solitaire suite. The recreation of this game will allow the user to enjoy the classical game anytime and anywhere as long as they have installed the application. Improving aspects such as graphics and custom speed will also make the game more interesting. We would like to add more features to the game to make it more customizable and help people enjoy the classical game in an exciting and new way.

### Context

The stakeholders are mainly the gaming audience, the older generation of game enthusiasts, youth and teens. Some other stakeholders that Although the game can be played by anyone, it is targeted towards the audience mentioned above who are most invested in the game. The environment is native app development using Python. This provides provides less flexibility than web API's but there still exists many useful libraries which can be used such as Pygame for example.
