

CAS 741 (Development of Scientific Computing Software)

Winter 2025

04 Requirements Continued

Dr. Spencer Smith

Faculty of Engineering, McMaster University

January 17, 2025

Requirements

- Administrative details
- Questions?
- Finish example goal statements
- Some advice on developing your SRS
- Requirements documentation for scientific computing
- A new requirements template
- Advantages of new template and examples
- The new template from a software engineering perspective
- Concluding remarks
- References

Administrative Details

- Course schedule is available as a [google calendar](#)
- Name your repo something other than cas741
- Assign me an issue to review your problem statements
 - ▶ State that you would like a review
 - ▶ Include a link to your problem statement
- Do not put generated files under version control
- Understand your `.gitignore` file
- Keep your tex files to 80 character width (easier for change tracking)

Administrative Details: Report Deadlines

| | | |
|--------------------------|---------|--------|
| Problem Statement | Week 02 | Jan 17 |
| System Req. Spec. (SRS) | Week 04 | Jan 31 |
| System VnV Plan | Week 06 | Feb 14 |
| MG + MIS | Week 09 | Mar 14 |
| Drasil Code | Week 09 | Mar 14 |
| Final Documentation | Week 13 | Apr 11 |

- The written deliverables will be graded based on the repo contents as of 11:59 pm of the due date
- If you need an extension for a **written** doc, please ask
- When ready, assign issues to your primary and secondary reviewers
- GitHub issues due two days after assignment deadlines
- From Drasil Code onward, Drasil projects no longer need to maintain traditional SRS

Administrative Details: Presentations

| | |
|--------------------|------------|
| SRS | Week 03/04 |
| Syst. VnV | Week 06 |
| POC Demo | Week 07 |
| MG + MIS | Week 09 |
| Drasil | Week 11 |
| Unit VnV/Implement | Week 12 |

- Specific schedule depends on final class registration
- Informal presentations with the goal of improving everyone's written deliverables
- Time for presentation includes time for questions
- We will have to be strict with the schedule
- Presentations WILL be interrupted with questions/criticism; please do not take it personally
- Any concerns, let the instructor know

Presentation Schedule

- SRS Present (15 min)
 - ▶ Jan 24: , , , , ,
 - ▶ Jan 28: , , , , ,
 - ▶ Jan 31: , , , , ,
 - ▶ Feb 4: ,

Presentation Sched Cont'd

Presentation Schedule

- 3 or 4 presentations each
 - ▶ SRS everyone
 - ▶ VnV and POC subset of class
 - ▶ Design subset of class
 - ▶ Implementation everyone
- If you will miss a presentation, please trade with someone
- Implementation presentation could be used to run a code review, or code walkthrough

Questions?

- Does anyone need help with cloning `capTemplate`?
 - ▶ “Use this template” button
 - ▶ Add `smiths` as a collaborator
 - ▶ Remove unneeded folders
 - ▶ Write problem statement
 - ▶ Assign issue to `smiths`
- Does anyone need help with modifying `Repos.csv`?
 - ▶ Access CAS GitLab server
 - ▶ Fork GitLab `cas741` repo
 - ▶ Fresh `git pull`
 - ▶ Modify `Repos.csv`, `git add`, `git commit`
 - ▶ Check your diff
 - ▶ Merge request
 - ▶ Note: do a fresh pull first, monitor other `merge requests`

Questions? Continued

- Does anyone need help with \LaTeX ?
 - ▶ Suggest using VSCode with L^AT_EX
- Questions about project choices?
- Questions about software tools?
- Questions about problem statements?

Questions on Qualities for SCS?

- Correctness (Thou shalt not lie)
- Reliability
- Robustness
- Performance
- Verifiability
- Productivity
- Usability
- Maintainability
- Reusability
- Portability
- Reproducibility
- Sustainability

Goal Statements for GlassBR

For GlassBR:

Given the dimensions of the glass plane, glass type, the characteristics of the explosion, and the tolerable probability of breakage, the goal statements are:

GS1: Analyze and predict whether the glass slab under consideration will be able to withstand the explosion of a certain degree which is calculated based on user input.

Goal Statements for Game Physics

For Game Physics:

- G_linear:** Given the physical properties, initial positions and velocities, and forces applied on a set of rigid bodies, determine their new positions and velocities over a period of time (IM-IM_FT).
- G_ang:** Given the physical properties, initial orientations and angular velocities, and forces applied on a set of rigid bodies, determine their new orientations and angular velocities over a period of time. (IM-IM_FR).
- G_dtcCol:** Given the initial positions and velocities of a set of rigid bodies, determine if any of them will collide with one another over a period of time.
- G_Col:** Given the physical properties, initial linear and angular positions and velocities, determine the new positions and velocities over a period of time of rigid bodies that have undergone a collision (IM-IM_C).

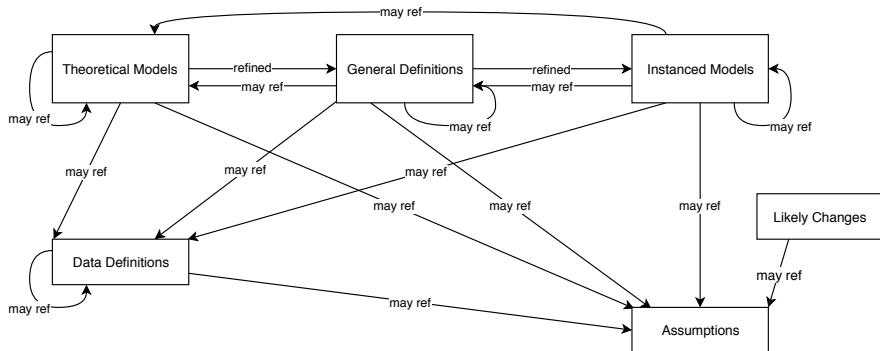

Goal Statements for Linear Solver

What would be a good goal statement for a library of linear solvers?

Goal Statements for Linear Solver

- G1 Given a system of n linear equations represented by matrix A and column vector b , return x such that $Ax = b$, if possible

Major Conceptual Parts of SRS/CA

Also Goal Statements and Requirements

First Things To Think About

- Goal statement(s)
- Inputs and outputs
- Units for inputs and outputs (and for all variables)
- Think about the types of your inputs and outputs (not everything is a real number)
- Document your types
- What are some common types in scientific computing?
- How will you write these in your SRS?

Types, Specifying Types, Defining Types

- \mathbb{R}
- \mathbb{R}^2
- $\mathbb{R}^{3 \times 3}$
- \mathbb{N}
- \mathbb{B}
- $\mathbb{R} \rightarrow \mathbb{R}$
- set of T
- $t \in \{2.5, 2.7, 3.0, \dots\}$ (from [GlassBR](#))
- $\text{ElemT} = \{\text{H}, \text{He}, \text{Li}, \dots\}$
- sequence of T
- $v : T$
- $\text{time} = \mathbb{R}$
- [Refined Projectile](#) uses types

SRS Advice

- Abstraction is your friend
 - ▶ You don't say “how” just “what”
 - ▶ Input $f : \mathbb{R} \rightarrow \mathbb{R}$
 - ▶ Output $x^* : \mathbb{R}$ such that $f(x^*) \leq f(x)$ for all $x \in \mathbb{R}$
- Write your goal(s) first
- Brainstorm theories and assumptions
- Iterate on the relationships between the theories and assumptions
- Remind yourself that the goal is long term productivity
- Reusability - only have to be clever/smart/thorough once
- Think about the information someone would need when joining your project

Examples, Checklist and Template

- Projectile Example
- GlassBR Example
- SWHS Example (Let's go through this one)
- Blank SRS from Template (Let's look at the advice/hints)
- Checklist

Problems with Developing Quality Scientific Computing Software

- Need to know requirements to judge reliability
- In many cases the only documentation is the code
- Reuse is not as common as it could be
 - ▶ Meshing software survey
 - ▶ Public domain finite element programs
 - ▶ etc.
- Many people unnecessarily develop “from scratch” [1]
- Cannot easily reproduce the work of others
- Neglect of simple software development technology [12]

Adapt Software Engineering Methods

- Software engineering improves and quantifies quality
- Successfully applied in other domains
 - ▶ Business and information systems
 - ▶ Embedded real time systems
- Systematic engineering process
- Design through documentation
- Use of mathematics
- Reuse of components
- Warranty rather than a disclaimer

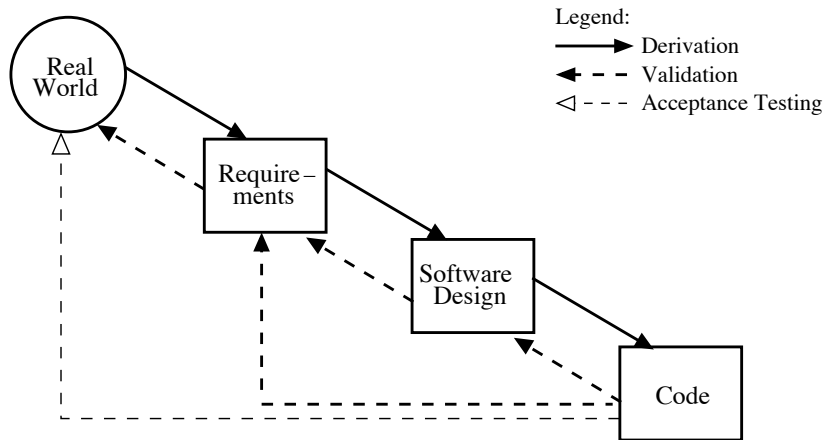

Developing Scientific Computing Software

- Facilitators
 - ▶ One user viewpoint for specifying a physical model
 - ▶ Assumptions can be used to distinguish models
 - ▶ High potential for reuse
 - ▶ Libraries
 - ▶ Already mathematical
- Challenges
 - ▶ Verification and Validation
 - ▶ Acceptance of software engineering methodologies
 - ▶ No existing templates or examples

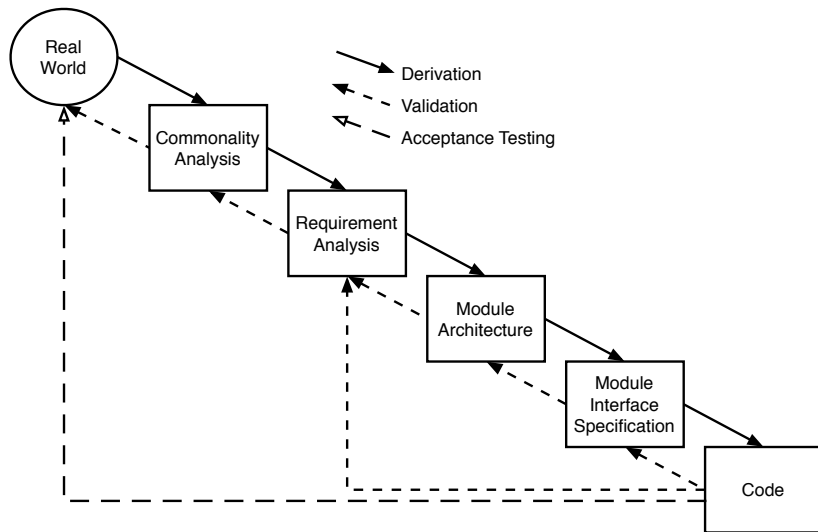

Outline of Discussion of Requirements

- Background on requirements elicitation, analysis and documentation
- Why requirements analysis for engineering computation?
- System Requirements Specification and template for beam analysis software
 - ▶ Provides guidelines
 - ▶ Eases transition from general to specific
 - ▶ Catalyses early consideration of design
 - ▶ Reduces ambiguity
 - ▶ Identifies range of model applicability
 - ▶ Clear documentation of assumptions

A Rational Design Process

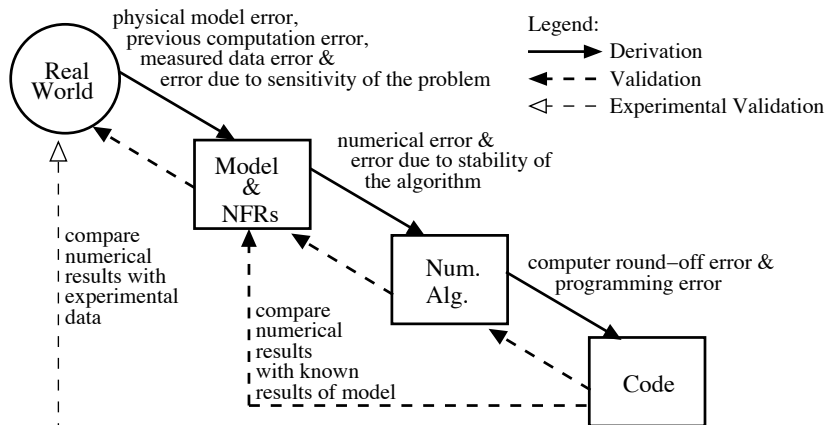

Sometimes Include Commonality Analysis

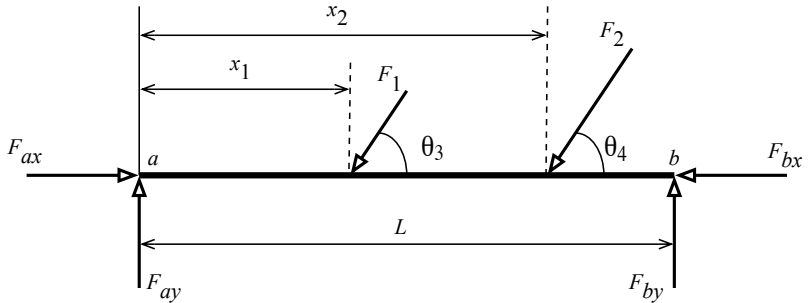

Software Requirements Activities

- A software requirement is a description of how the system should behave, or of a system property or attribute
- Requirements should be **abstract, unambiguous, complete, consistent, modifiable, verifiable** and **traceable**
- Requirements should express “What” not “How”
- Formal versus informal specification
- Functional versus nonfunctional requirements
- Software requirements specification (SRS)
- Requirements template

Why Requirements Analysis?

Beam Analysis Software

Proposed Template

From [11]

1. Reference Material: a) Table of Symbols ...
2. Introduction: a) Purpose of the Document; b) Scope of the Software Product; c) Organization of the Document.
3. General System Description: a) System Context; b) User Characteristics; c) System Constraints.
4. Specific System Description:
 - 4.1 Problem Description: i) Background Overview ...
 - 4.2 Solution specification: i) Assumptions; ii) Theoretical Models; ...
 - 4.3 Non-functional Requirements: i) Accuracy of Input Data; ii) Sensitivity ...
5. Traceability Matrix
6. List of Possible Changes in the Requirements
7. Values of Auxiliary Constants

Provides Guidance

- Details will not be overlooked, facilitates multidisciplinary collaboration
- Encourages a systematic process
- Acts as a checklist
- Separation of concerns
 - ▶ Discuss purpose separately from organization
 - ▶ Functional requirements separate from non-functional
- Labels for cross-referencing
 - ▶ Sections, physical system description, goal statements, assumptions, etc.
 - ▶ PS1.a “the shape of the beam is long and thin”

Eases Transition from General to Specific

- “Big picture” first followed by details
- Facilitates reuse
- “Introduction” to “General System Description” to “Specific System Description”
- Refinement of abstract goals to theoretical model to instanced model
 - ▶ **G1**. Solve for the unknown external forces applied to the beam
 - ▶ **T1** $\sum F_{xi} = 0, \sum F_{yi} = 0, \sum M_i = 0$
 - ▶ **M1** $F_{ax} - F_1 \cdot \cos \theta_3 - F_2 \cdot \cos \theta_4 - F_{bx} = 0$

Ensures Special Cases are Considered

| H_2 | | H_1 | |
|---|--|---|-------------------------------------|
| $S_{unkF} \notin \mathbb{P}_3$ | - | $S_{GET} = S_{sym} - S_{unkF}$ | $S_{GET} \neq (S_{sym} - S_{unkF})$ |
| $S_{unkF} = \{\odot F_{ax}, \odot F_{bx}, \odot F_{ay}\}$ | - | $(ErrorMsg' = InvalidUnknown) \wedge ChangeOnly(ErrorMessage)$ | FALSE |
| $S_{unkF} = \{\odot F_{ax}, \odot F_{ay}, \odot F_1\}$ | $x_1 \neq 0$ $\wedge \theta_3 \neq 0$ $\wedge \theta_3 \neq 180$ | $ErrorMsg' = NoSolution \wedge ChangeOnly(ErrorMessage)$ | |
| | otherwise | $F'_{ax} = \frac{-\cos \theta_3 F_2 x_2 \sin \theta_4 + \cos \theta_3 F_{by} L + F_2 \cos \theta_4 x_1 \sin \theta_3 + F_{bx} x_1 \sin \theta_3}{x_1 \sin \theta_3}$ \wedge $F'_{ay} = -\frac{F_2 x_2 \sin \theta_4 - F_{by} L - F_2 \sin \theta_4 x_1 + F_{by} x_1}{x_1 \sin \theta_3}$ $\wedge F'_1 = \frac{-F_2 x_2 \sin \theta_4 + F_{by} L}{x_1 \sin \theta_3} \wedge ChangeOnly(S_{unkF})$ | |
| | | $(ErrorMsg' = Indeterminant) \wedge ChangeOnly(ErrorMessage)$ | |
| H_2 | | G | |

Catalyses Early Consideration of Design

- Identification of significant issues early will improve the design
- Section for considering sensitivity
 - ▶ Conditioning?
 - ▶ Buckling of beam
- Non-functional requirements
 - ▶ Tradeoffs in design
 - ▶ Speed efficiency versus accuracy
- Tolerance allowed for solution: $|\sum F_{xi}|/\sqrt{\sum F_{xi}^2} \leq \epsilon$
- Solution validation strategies (now in a separate document)
- List of possible changes in requirements

Reduces Ambiguity

- Unambiguous requirements allow communication between experts, requirements review, designers do not have to make arbitrary decisions
- Tabular expressions allow automatic verification of completeness
- Table of symbols
- Abbreviations and acronyms
- Scope of software product and system context
- User characteristics
- Terminology definition and data definition
- Ends arguments about the relative merits of different designs

Identifies Range of Model Applicability

- Clear documentation as to when model applies
- Can make the design specific to the problem
- Input data constraints are identified
 - ▶ Physically meaningful: $0 \leq x_1 \leq L$
 - ▶ Maintain physical description: PS1.a, $0 < h \leq 0.1L$
 - ▶ Reasonable requirements: $0 \leq \theta_3 \leq 180$
- The constraints for each variable are documented by tables, which are later composed together
- $(\min_f \leq |F_{ax}| \leq \max_f) \wedge (|F_{ax}| \neq 0) \Rightarrow$
 $\forall (FF | @FF \in S_F \cdot FF \neq 0 \wedge \frac{\max\{|F_{ax}|, |FF|\}}{\min\{|F_{ax}|, |FF|\}} \leq 10^{r_f})$
- Typical values

Summary of Variables

| Var | Type | Physical Constraints | System Constraints | Prop |
|------------|-------------|--------------------------------|-------------------------------|------|
| x | <i>Real</i> | $x \geq 0 \wedge x \leq L$ | $\min_d \leq x \leq \max_d$ | NIV |
| x_1 | <i>Real</i> | $x_1 \geq 0 \wedge x_1 \leq L$ | $\min_d \leq x_1 \leq \max_d$ | IN |
| x_2 | <i>Real</i> | $x_2 \geq 0 \wedge x_2 \leq L$ | $\min_d \leq x_2 \leq \max_d$ | IN |
| e | <i>Real</i> | $e > 0 \wedge e \leq h$ | $\min_e \leq e \leq \max_e$ | IN |
| h | <i>Real</i> | $h > 0 \wedge h \leq 0.1L$ | $\min_h \leq h \leq \max_h$ | IN |
| L | <i>Real</i> | $L > 0$ | $\min_d \leq L \leq \max_d$ | IN |
| E | <i>Real</i> | $E > 0$ | $\min_E \leq E \leq \max_E$ | IN |
| θ_3 | <i>Real</i> | $-\infty < \theta_3 < +\infty$ | $0 \leq \theta_3 \leq 180$ | IN |
| θ_4 | <i>Real</i> | $-\infty < \theta_4 < +\infty$ | $0 \leq \theta_4 \leq 180$ | IN |
| V | <i>Real</i> | $-\infty < V < +\infty$ | - | OUT |
| M | <i>Real</i> | $-\infty < M < +\infty$ | - | OUT |
| y | <i>Real</i> | $-\infty < y < +\infty$ | - | OUT |
| ... | ... | ... | ... | ... |

Clear Documentation of Assumptions

| Phy. Sys. /Goal | Data /Model | Assumption | | | | | | | | | | Model | |
|-----------------------|----------------|------------|-----|-----|-----|-----|-----|-----|-----|-----|-----|-----------|-----|
| | | A1 | A2 | ... | A4 | ... | A8 | A9 | A10 | ... | A14 | M1 | ... |
| G1 | T1 | ✓ | | ... | | ... | ✓ | ✓ | | ... | | ✓ | ... |
| G2 | T2 | ✓ | | ... | | ... | ✓ | ✓ | | ... | | | ... |
| G3 | T3 | ✓ | | ... | | ... | | ✓ | ✓ | ... | | | ... |
| | M1 | | ✓ | ... | | ... | | | | ... | | ✓ | ... |
| PS1.a | <i>L</i> | | | ... | | ... | | | ✓ | ... | | ... | ... |
| ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... | ... |

A10. The deflection of the beam is caused by bending moment only, the shear does not contribute.

More on the Template

- Why a new template?
- The new template
 - ▶ Overview of changes from existing templates
 - ▶ Goal → Theoretical Model → Instanced Model hierarchy
 - ▶ Traceability matrix
 - ▶ System behaviour, including input constraints

Why a New Template?

From [10, 3]

1. One user viewpoint for the physical model
2. Assumptions distinguish models
3. High potential for reuse of functional requirements
4. Characteristic hierarchical nature facilitates change
5. Continuous mathematics presents a challenge

Overview of the New Template

- Reference Material
- Introduction: a) Purpose of the Document b) Scope of the Software Product c) Organization of the Document
- General System Description: a) System Context b) User Characteristics c) System Constraints
- Specific System Description: a) Problem Description b) Solution Characteristics Specification c) Non-functional Requirements
- Other System Issues
- Traceability Matrix
- List of Possible Changes in the Requirements
- Values of Auxiliary Constants
- References

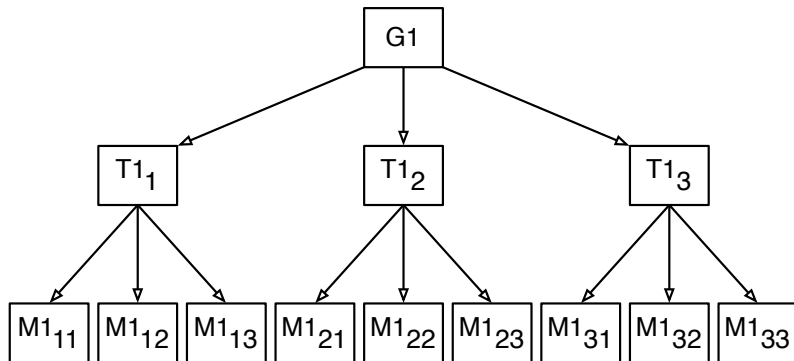

Overview of the New Template

- Reference Material
- Introduction: a) Purpose of the Document b) Scope of the Software Product c) Organization of the Document
- General System Description: a) System Context b) User Characteristics c) System Constraints
- Specific System Description: a) Problem Description b) Solution Characteristics Specification c) Non-functional Requirements
- Other System Issues
- Traceability Matrix
- List of Possible Changes in the Requirements
- Values of Auxiliary Constants
- References

Excerpts from Specific System Description

- Problem Description
 - ▶ Physical system description (**PS**)
 - ▶ Goals (**G**)
- Solution Characteristics Specification
 - ▶ Assumptions (**A**)
 - ▶ Theoretical models (**T**)
 - ▶ Data definitions
 - ▶ Instanced models (**M**)
 - ▶ Data constraints
 - ▶ System behaviour
- Non-functional Requirements
 - ▶ Accuracy of input data
 - ▶ Sensitivity of the model
 - ▶ Tolerance of the solution
 - ▶ Solution validation strategies (now moved to a separate document)

Refinement from Abstract to Concrete

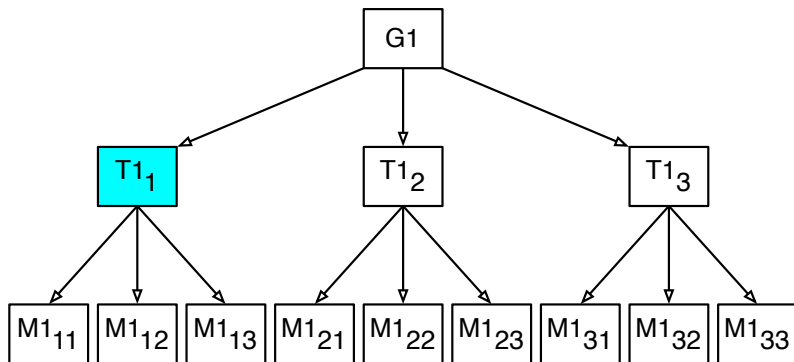

Refinement from Abstract to Concrete

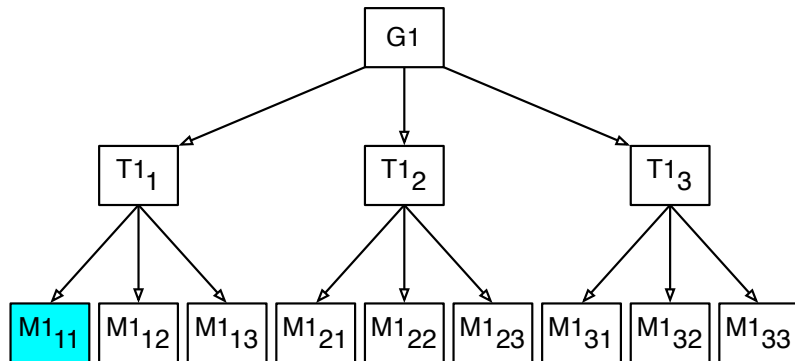

G1: Solve for unknown forces

Refinement from Abstract to Concrete

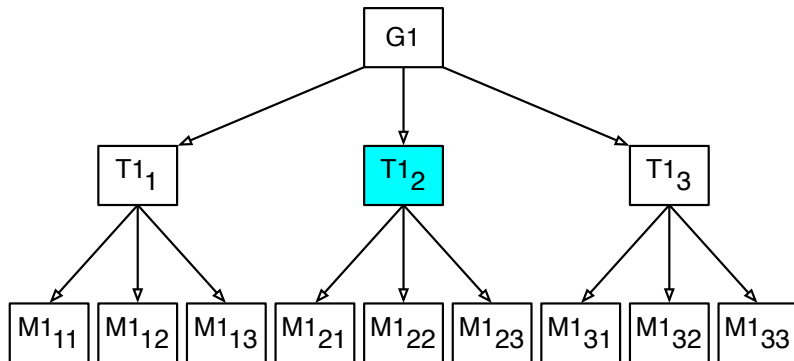

$$(\mathbf{T1_1}) \left\{ \begin{array}{l} \sum F_{xi} = 0 \\ \sum F_{yi} = 0 \\ \sum M_i = 0 \end{array} \right.$$

Refinement from Abstract to Concrete

$$(M1) \begin{cases} F_{ax} - F_1 \cdot \cos \theta_3 - F_2 \cdot \cos \theta_4 - F_{bx} = 0 \\ F_{ay} - F_1 \cdot \sin \theta_3 - F_2 \cdot \sin \theta_4 + F_{by} = 0 \\ -F_1 \cdot x_1 \sin \theta_3 - F_2 \cdot x_2 \sin \theta_4 + F_{by} \cdot L = 0 \end{cases}$$

Refinement from Abstract to Concrete

The virtual work done by all the external forces and couples acting on the system is zero for each independent virtual displacement of the system, or mathematically $\delta U = 0$

Other goals and models

- **G2:** Solve for the functions of shear force and bending moment along the beam
- **G3:** Solve for the function of deflection along the beam
- **T3₁:** $\frac{d^2y}{dx^2} = \frac{M}{EI}$, $y(0) = y(L) = 0$
- **T3₂:** y determined by moment area method
- **T3₃:** y determined using Castigliano's theorem
- **M3₁₁:** $y = \frac{12 \int_0^L (\int_0^L M dx) dx}{Eeh^3}$, $y(0) = y(L) = 0$

Kreyman and Parnas Five Variable Model

- See [2]
- An alternative approach
- Unfortunately the numerical algorithm is not hidden in the requirements specification
- The analogy with real-time systems leads to some confusion

Links to Papers

- [KreymanAndParnas2002](#) [2] 4 variable method

Summary of Template

- Quality is a concern for scientific computing software
- Software engineering methodologies can help
- Motivated, justified and illustrated a method of writing requirements specification for engineering computation to improve reliability
- Also improve quality with respect to usability, verifiability, maintainability, reusability and portability
- Tabular expressions to reduce ambiguity, encourage systematic approach
- Conclusions can be generalized because other computation problems follow the same pattern of *Input* then *Calculate* then *Output*
- Benefits of approach should increase as the number of details and the number of people involved increase

Summary of Template (Continued)

- A new template for scientific computing has been developed
- Characteristics of scientific software guided the design
- Designed for reuse
- Functional requirements split into “Problem Description” and “Solution Characteristics Specification”
- Traceability matrix
- Addresses nonfunctional requirements (but room for improvement)
